

WHAT IS CLAIMED IS:

1. An image capture method, the method comprising:
activating an interface element for a computing system having a control
logic and a display to position a capture interface element over a portion of an image
5 presented on said display by said computing system; and
capturing said portion to an image transfer system external to said
computing system using said computing system.
2. A computer program product comprising a computer readable
medium carrying program instructions for capturing an image when executed using a
10 computing system, the executed program instructions executing a method, the method
comprising:
activating an interface element for the computing system having a control
logic and a display to position a capture interface element over a portion of an image
presented on said display by the computing system; and
15 capturing said portion to an image transfer system external to the
computing system using the computing system.
3. An information distribution system, comprising:
a kiosk having a display presenting one or more images from a computing
system; and
20 an interactive pad transfer system, coupled to said computing system, to
capture one or more of said one or more images by proximating an element of said
interactive pad transfer system to a portion of said display presenting said one or more
images to be captured.
